1. General Description

This specification applies to the 46.0 inch Color TFT-LCD Module P460HVN05.0. This LCD module has a TFT active matrix type liquid crystal panel 1,920x1,080 pixels, and diagonal size of 46.0 inch. This module supports 1,920x1080 resolution display. Each pixel is divided into Red, Green and Blue sub-pixels or dots which are arranged in vertical stripes. Gray scale or the brightness of the sub-pixel color is determined with a 10-bit gray scale signal for each dot.

The P460HVN05.0 has been designed to apply the 10-bit 2 channel LVDS interface method. The main feature of P460HVN05.0 would be high brightness, high contrast, and wide viewing angle.

Special material applied into this model is:

1. Advanced wide temperature LC(-40°C~110°C)

* General Information

Items	Specification	Unit	Note
Active Screen Size	46.0	Inch	
Display Area	1018.08(H) x 572.67(V)	mm	
Outline Dimension	1044.1(H) x 598.7(V) x 36.4(D)	mm	D: Front bezel to Back Bezel
Driver Element	a-Si TFT active matrix		
Display Colors	10 bit (8bit+FRC), 1073.7M	Colors	
Number of Pixels	1,920x1080	Pixel	
Pixel Pitch	0.53025 (H) x 0.53025(W)	mm	
Pixel Arrangement	RGB vertical stripe		
Display Operation Mode	Normally Black		
Surface Treatment	AG		Haze = 28%
Rotate Function	Unachievable		Note 1
Display Orientation	Landscape/Portrait Enable		Note 2
Operating Time	24/7		See Chapter 11.3 for details
Frame Rate	60	Hz	See Chapter 5.1 for details
LED MTTF	70K (TBD)	hrs	See Chapter 6.1 for details

Note:

Note 1: Rotate Function refers to LCD display could be able to rotate. This function does not work in this model.

Note 2:

1. Landscape Mode:

The default placement is T-Con Side on the lower side and the image is shown upright via viewing from the front.

2. Portrait Mode:

The default placement is that T-Con side has to be placed on the left side via viewing from the front.

Landscape (Front view)

Portrait (Front view)

2. Absolute Maximum Ratings

The followings are maximum values which, if exceeded, may cause faulty operation or damage to the unit

Item	Symbol	Min	Max	Unit	Conditions
Logic/LCD Drive Voltage	Vcc	-0.3	14	[Volt]	Note 1
Input Voltage of Signal	Vin	-0.3	4	[Volt]	Note 1
Operating Temperature	TOP	0	+50	[°C]	Note 2
Operating Humidity	HOP	10	90	[%RH]	Note 2
Storage Temperature	TST	-20	+60	[°C]	Note 2
Storage Humidity	HST	10	90	[%RH]	Note 2
Panel Surface Temperature	PST		85	[°C]	Note 3

Note 1: Duration:50 msec.

Note 2 : Maximum Wet-Bulb should be 39°C and No condensation.

The relative humidity must not exceed 90% non-condensing at temperatures of 40°C or less. At temperatures greater than 40°C, the wet bulb temperature must not exceed 39°C.

Note 3: Surface temperature is measured at 50°C Dry condition

3. Optical Specification

Optical characteristics are determined after the unit has been 'ON' and stable for approximately 45 minutes in a dark environment at 25°C while panel is placed in the default position. The default position is T-con side as the top side of panel. The value specified is at an approximate distance 50cm from the LCD surface at a viewing angle of ϕ and θ equal to 0°.

Fig.1 presents additional information concerning the measurement equipment and method.

Note:

1. Contrast Ratio (CR) is defined mathematically as:

$$\text{Contrast Ratio} = \frac{\text{Surface Luminance of } L_{on5}}{\text{Surface Luminance of } L_{off5}}$$

2. Surface luminance is luminance value at point 5 across the LCD surface 50cm from the surface with all pixels displaying white. From more information see FIG 2. When lamp current $I_H = 11\text{mA}$. $L_{WH} = L_{on5}$ where L_{on5} is the luminance with all pixels displaying white at center 5 location.

3. The variation in surface luminance, δ_{WHITE} is defined (center of Screen) as:

$$\delta_{WHITE(9P)} = \text{Maximum}(L_{on1}, L_{on2}, \dots, L_{on9}) / \text{Minimum}(L_{on1}, L_{on2}, \dots, L_{on9})$$

4. Response time T_γ is the average time required for display transition by switching the input signal for five luminance ratio (0%,25%,50%,75%,100% brightness matrix) and is based on $F_v = 60\text{Hz}$ to optimize.

T_γ is determined by 10% to 90% brightness difference of rising or falling period. (As illustrated)

Measured Response Time		Target				
		0%	25%	50%	75%	100%
Start	0%		0% to 25%	0% to 50%	0% to 75%	0% to 100%
	25%	25% to 0%		25% to 50%	25% to 75%	25% to 100%
	50%	50% to 0%	50% to 25%		50% to 75%	50% to 100%
	75%	75% to 0%	75% to 25%	75% to 50%		75% to 100%
	100%	100% to 0%	100% to 25%	100% to 50%	100% to 75%	

5. Viewing angle is the angle at which the contrast ratio is greater than 10. The angles are determined for the horizontal or x axis and the vertical or y axis with respect to the z axis which is normal to the LCD surface. For more information see FIG4.

FIG. 2 Luminance

FIG.3 Response Time

The response time is defined as the following figure and shall be measured by switching the input signal for “any level of gray (bright)” and “any level of gray (dark)”.

FIG.4 Viewing Angle

4. Interface Specification

4.1. Input power

The P460HVN05.0 module requires power inputs which are employed to power the LCD electronics and to drive the TFT array and liquid crystal.

Item	Symbol	Min.	Typ.	Max	Unit	Note
Power Supply Input Voltage	V _{DD}	10.8	12	13.2	V	1
Power Supply Input Current	Black pattern	-	0.5(TBD)	0.6(TBD)	A	2
	White pattern	-	0.6(TBD)	0.7(TBD)	A	
	H-strip pattern	-	0.9(TBD)	1.1(TBD)	A	
Power Consumption	Black pattern	-	6.0(TBD)	7.2(TBD)	Watt	
	White pattern	-	7.2(TBD)	8.6(TBD)	Watt	
	H-strip pattern	-	10.8(TBD)	13.0(TBD)	Watt	
Inrush Current	I _{RUSH}	--	--	TBD	A	3

The ripple voltage should be fewer than 5% of V_{DD}.

Note1. Test Condition:

- (1) V_{DD} = 12.0V, (2) F_v = 60Hz, (3) F_{clk} = 74.25MHz, (4) Temperature = 25 °C
- (5) Power dissipation check pattern. (Only for power design)

a. Black pattern

b. White pattern

c. H-Strip pattern

Note2. Measurement condition : Rising time = 400us

4.2. Input Connection

- LCD connector:
- 187059-5122(P-TWO) / 115E51-0000RA-M3-R(Starconn) / FI-RTE51SZ-HF(JAE)
- Matching: FI-RE51HL or Compatible

Note4. Data Bit mode format selection

BIT_SEL	Mode
H or OPEN	10Bit
L	8Bit

Input equivalent impedance of BIT_SEL pin

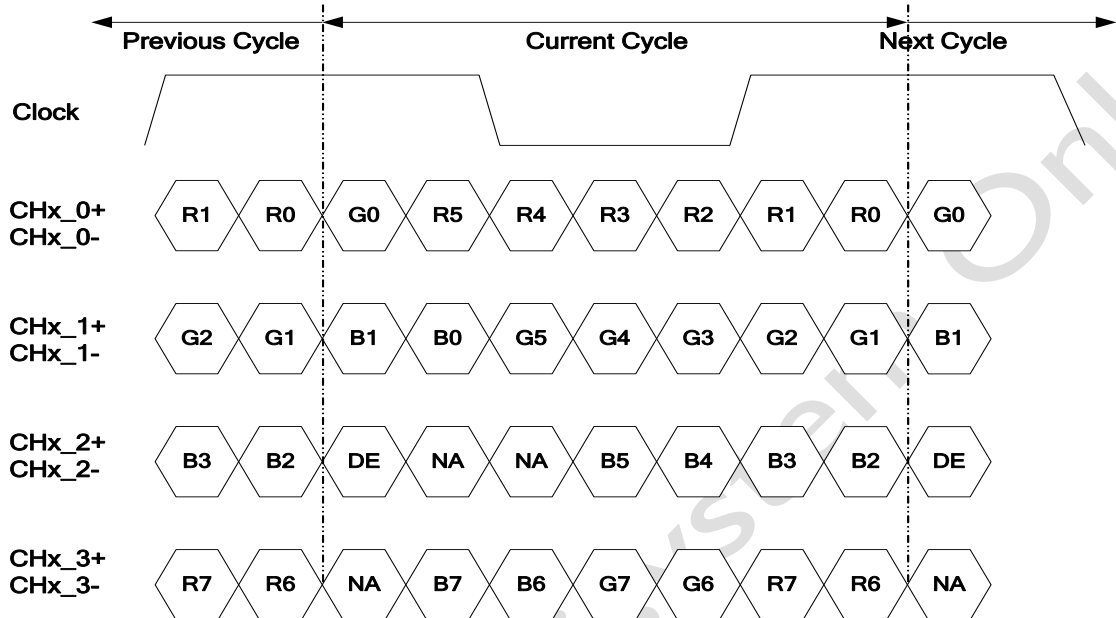

4.3. Input Data Format

4.3.1 LVDS color data mapping

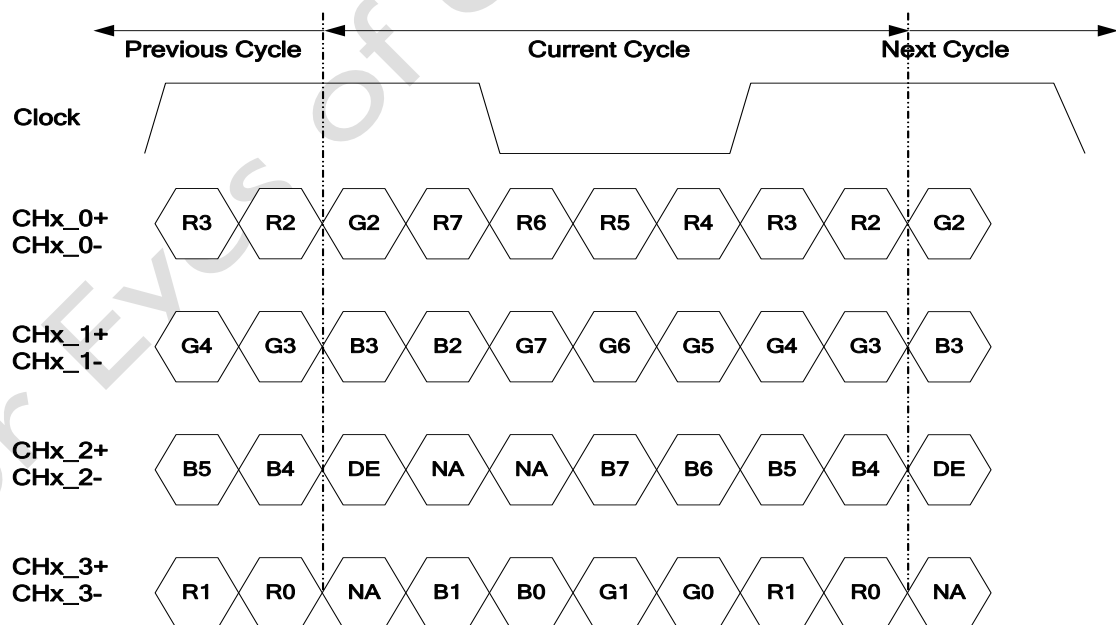

LVDS Option for 8bit

■ LVDS Option NS

Note: x = 1, 2, 3, 4...

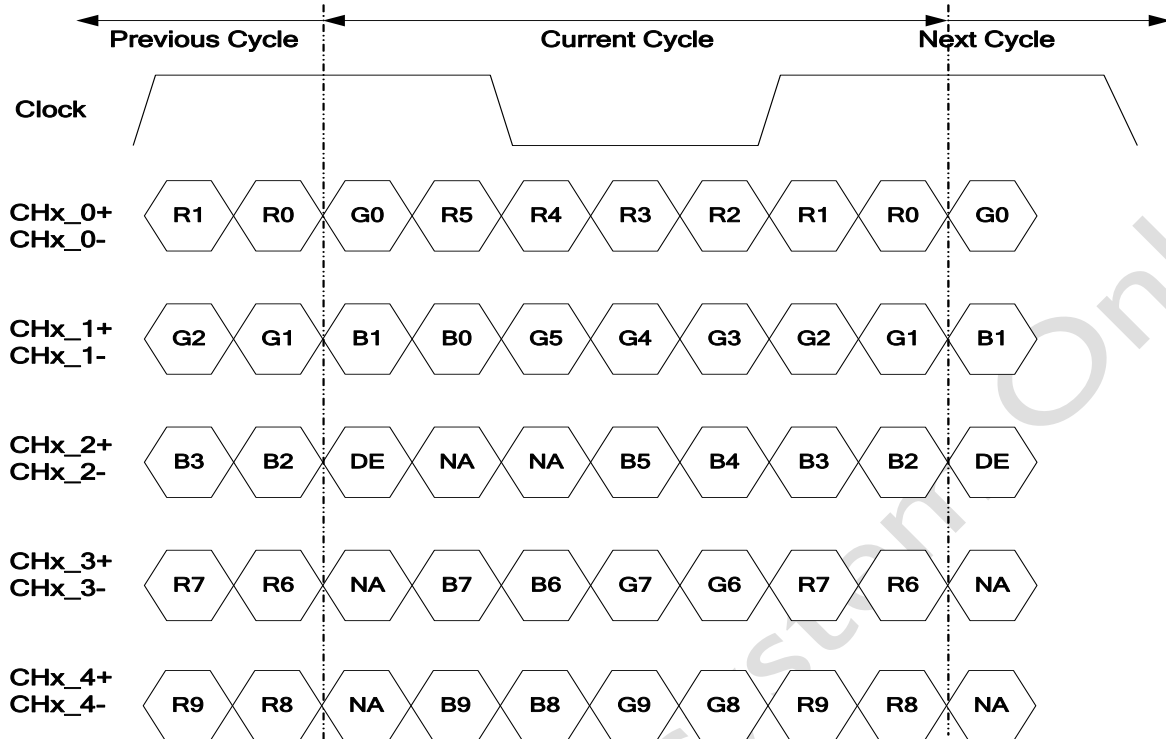

■ LVDS Option JEIDA

Note: x = 1, 2, 3, 4...

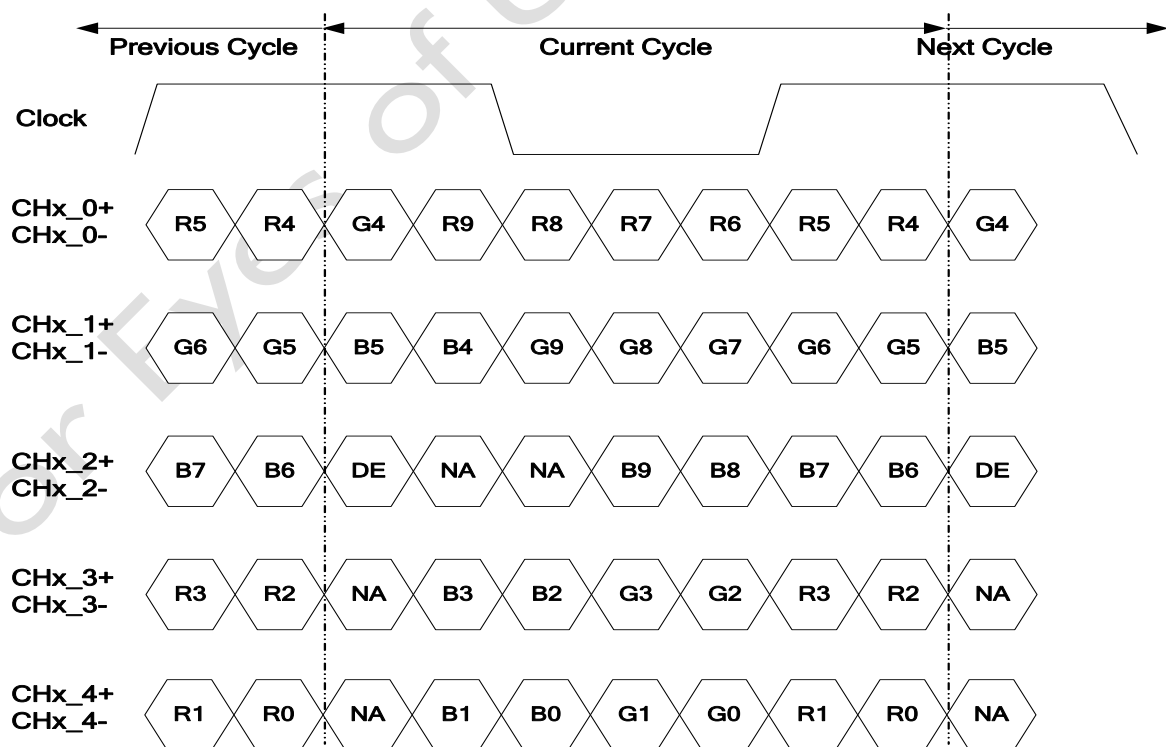

LVDS Option for 10bit

■ **LVDS Option NS**

Note: x = 1, 2, 3, 4...

■ **LVDS Option JEIDA**

Note: x = 1, 2, 3, 4...

4.3.2 Color Input Data Reference

The brightness of each primary color (red, green and blue) is based on the 8 bit gray scale data input for the color; the higher the binary input, the brighter the color. The table below provides a reference for color versus data input.

COLOR DATA REFERENCE

8bit

Color		Input Color Data

5. Signal Timing Specification

This is the signal timing required at the input of the user connector. All of the interface signal timing should be satisfied with the following specifications for its proper operation.

5.1.1. Timing Table (DE only Mode)

Vertical Frequency Range (60Hz)

Signal	Item	Symbol	Min.	Typ.	Max	Unit
Vertical Section	Period	Tv	1100	1125	1480	Th
	Active	Tdisp (v)	1080			
	Blanking	Tblk (v)	20	45	400	Th
Horizontal Section	Period	Th	1040	1100	1328	Tclk
	Active	Tdisp (h)	960			
	Blanking	Tblk (h)	80	140	368	Tclk
Clock	Frequency	Fclk=1/Tclk	53	74.25	82	MHz
Vertical Frequency	Frequency	Fv	47	60	63	Hz
Horizontal Frequency	Frequency	Fh	60	67.5	73	KHz

Notes:

(1) Display position is specific by the rise of DE signal only.

Horizontal display position is specified by the rising edge of 1st DCLK after the rise of 1st DE, is displayed on the left edge of the screen.

(2) Vertical display position is specified by the rise of DE after a "Low" level period equivalent to eight times of horizontal period. The 1st data corresponding to one horizontal line after the rise of 1st DE is displayed at the top line of screen.

(3) If a period of DE "High" is less than 1920 DCLK or less than 1080 lines, the rest of the screen displays black.

(4) The display position does not fit to the screen if a period of DE "High" and the effective data period do not synchronize with each other.

5.1.2. Signal Timing Waveform

5.2. Input interface characteristics

Parameter	Symbol	Value			Unit	Note
		Min.	Typ.	Max		
Input Differential Voltage	$ V_{ID} $	200	400	600	mV _{DC}	1
Differential Input High Threshold Voltage	V_{TH}	+100	--	+300	mV _{DC}	1
Differential Input Low Threshold Voltage	V_{TL}	-300	--	-100	mV _{DC}	1
Input Common Mode Voltage	V_{ICM}	1.1	1.25	1.4	V _{DC}	1
Input Channel Pair Skew Margin	$t_{SKEW (CP)}$	-500	--	+500	ps	2
Input Channel Pair Skew Margin (only for M*Star MST7428BB)	$t_{SKEW (CP)}$	-400	--	+400	ps	2
Receiver Clock : Spread Spectrum Modulation range	Fclk _{ss}	Fclk -3%	--	Fclk +3%	MHz	3
Receiver Clock : Spread Spectrum Modulation frequency	F _{SS}	30	--	200	KHz	3
Receiver Data Input Margin Fclk = 85 MHz Fclk = 65 MHz	t _{RMG}	-0.4 -0.5	--	0.4 0.5	ns	8

Note1. $V_{ICM} = 1.25V$

Note2. Input Channel Pair Skew Margin

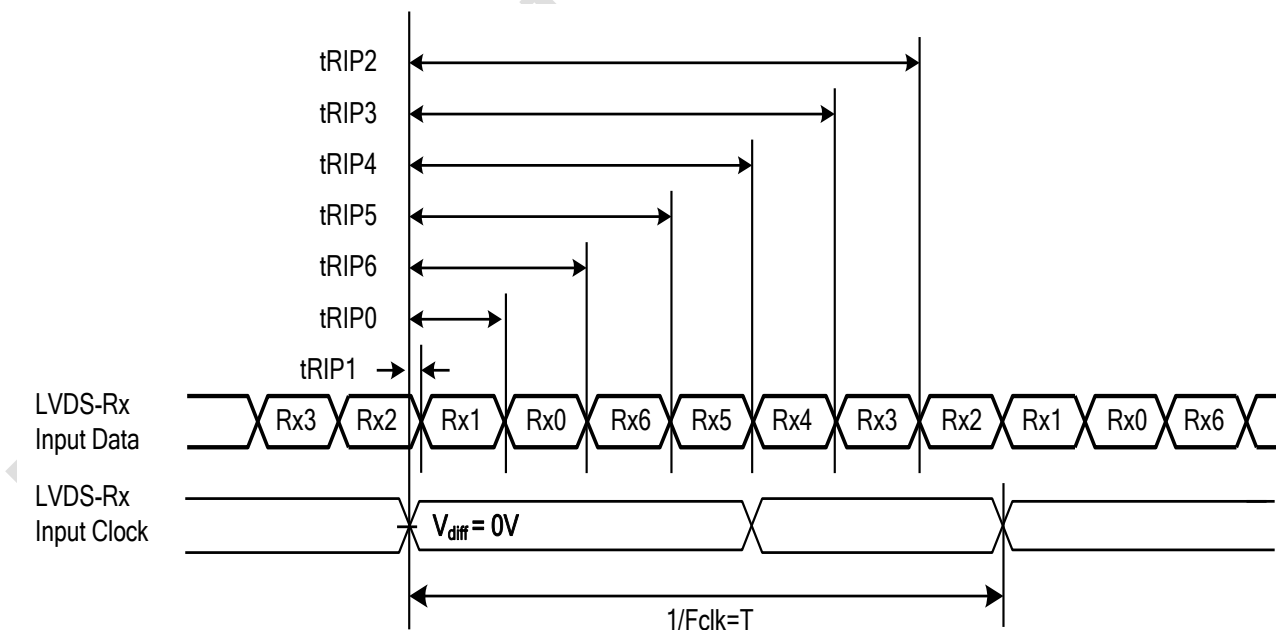

Note3. LVDS Receiver Clock SSCG (Spread spectrum clock generator) is defined as below figures.

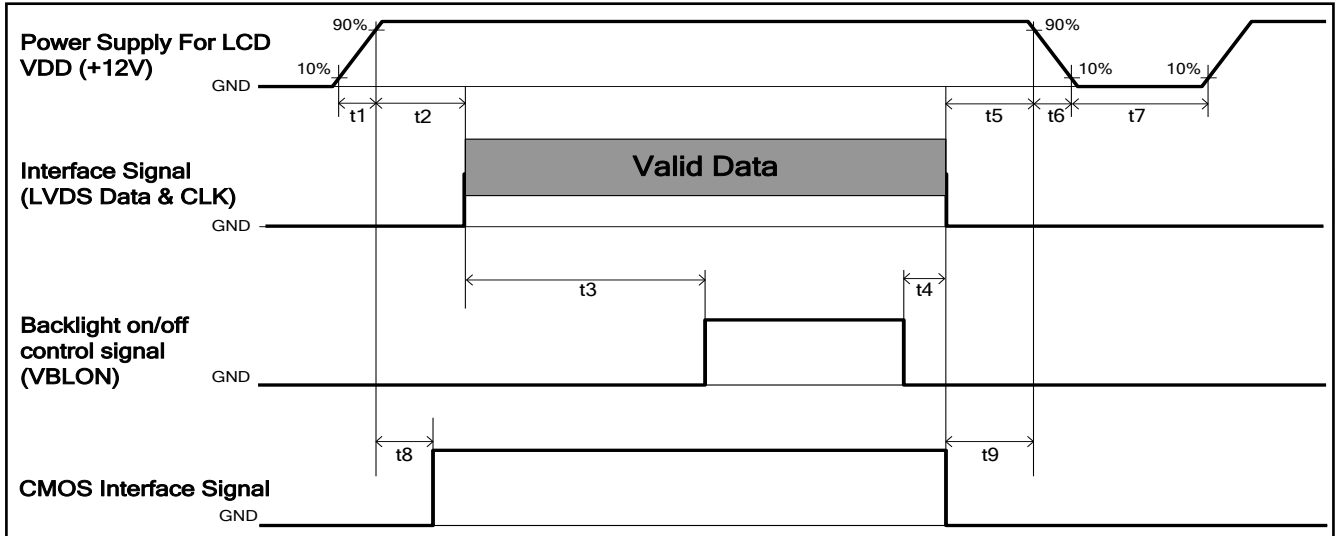

Note4. Receiver Data Input Margin

Parameter	Symbol	Rating			Unit	Note
		Min	Type	Max		
Input Clock Frequency	Fclk	Fclk (min)	--	Fclk (max)	MHz	$T=1/Fclk$
Input Data Position0	tRIP1	- tRMG	0	tRMG	ns	
Input Data Position1	tRIP0	$T/7 - tRMG $	$T/7$	$T/7 + tRMG $	ns	
Input Data Position2	tRIP6	$2T/7 - tRMG $	$2T/7$	$2T/7 + tRMG $	ns	
Input Data Position3	tRIP5	$3T/7 - tRMG $	$3T/7$	$3T/7 + tRMG $	ns	
Input Data Position4	tRIP4	$4T/7 - tRMG $	$4T/7$	$4T/7 + tRMG $	ns	
Input Data Position5	tRIP3	$5T/7 - tRMG $	$5T/7$	$5T/7 + tRMG $	ns	
Input Data Position6	tRIP2	$6T/7 - tRMG $	$6T/7$	$6T/7 + tRMG $	ns	

5.3. Power Sequence

Power Sequence of LCD

Parameter	Values			Unit
	Min.	Type.	Max.	
t1	0.4	---	30	ms
t2	0.1	---	50	ms
t3	450	---	---	ms
t4	0 ^{*1}	---	---	ms
t5	0	---	---	ms
t6	---	---	--- ^{*2}	ms
t7	500	---	---	ms
t8	10	---	50	ms
t9	0	---	---	ms

Note:

(1) t4=0 : concern for residual pattern before BLU turn off.

(2) t6 : voltage of VDD must decay smoothly after power-off. (customer system decide this value)

6. Backlight Specification

6.1. Electrical specification

	Item	Symbol	Condition	Spec			Unit	Note	
				Min	Typ	Max			
1	Input Voltage	V _{DDB}	-	TBD	24	TBD	VDC	-	
2	Input Current	I _{DDB}	V _{DDB} =24V	--	6.9		ADC	1	
3	Input Power	P _{DDB}	V _{DDB} =24V	--	166		W	1	
4	Inrush Current	I _{RUSH}	V _{DDB} =24V	-	-	TBD	ADC	2	
5	On/Off control voltage	V _{BLON}	ON	V _{DDB} =24V	2	-	3.3	VDC	-
			OFF		0	-	0.8		3
6	On/Off control current	I _{BLON}	V _{DDB} =24V	-	-	1.5	mA	-	
7	External PWM Control Voltage	V _{EPWM}	MAX	V _{DDB} =24V	2	-	5.5	VDC	-
			MIN		0	-	0.8		-
8	External PWM Control Current	I _{EPWM}	V _{DDB} =24V	-	-	2	mADC	-	
9	External PWM Duty ratio	D _{EPWM}	V _{DDB} =24V	5	-	100	%	4	
10	External PWM Frequency	F _{EPWM}	V _{DDB} =24V	90	180	240	Hz	-	
11	DET status signal	DET	HI	V _{DDB} =24V	Open Collector			VDC	5
			LO		0	-	0.8	VDC	5
12	Input Impedance	R _{in}	V _{DDB} =24V	300			Kohm	-	
13	LED MTTF	LED_MTTF		70,000 (TBD)			Hr	6, 7	

Note 1 : Dimming ratio= 100% (MAX) (Ta=25±5°C, Turn on for 45minutes)

Note 2: Measurement condition Rising time = 20ms (V_{DDB} : 10%~90%) and at dimming ratio = 100%

Note 3: When BLU off (V_{DDB} = 24V , V_{BLON} = 0V) , I_{DDB} (max) = 0.1A

Note 4: Less than 5% dimming control is functional well and no backlight shutdown happened

Note 5: Normal: 0~0.8V ; Abnormal : Open collector

Note 6: LED MTTF is defined as the time which luminance of LED is 50% compared to its original value.

[Operating condition: Continuous operating at Ta = 25±2°C, for single LED only]

Note7: MTTF is a reference index, it is not representative of warranty.

6.2. Input Pin Assignment

LED driver board connector: CI0114M1HRL-NH(CviLux)

Pin	Symbol	Description	NOTE
1	VDDB	Operating Voltage Supply, +24V DC regulated	
2	VDDB	Operating Voltage Supply, +24V DC regulated	
3	VDDB	Operating Voltage Supply, +24V DC regulated	
4	VDDB	Operating Voltage Supply, +24V DC regulated	
5	VDDB	Operating Voltage Supply, +24V DC regulated	
6	BLGND	Ground and Current Return	
7	BLGND	Ground and Current Return	
8	BLGND	Ground and Current Return	
9	BLGND	Ground and Current Return	
10	BLGND	Ground and Current Return	
11	DET	BLU status detection: Normal : 0~0.8V ; Abnormal : Open collector (Recommend Pull high R>10K, VDD=3.3V)	1
12	VBLON	BLU On-Off control: BL On : High/Open (2V~5.5V); BL off : Low (0~0.8V/GND)	2,3
13	NC	NC	4
14	PDIM	External PWM (5%~100% Duty, open for 100%)	2, 5

LED driver board connector: CI0112M1HRL-NH(CviLux)

Pin	Symbol	Description	Note
1	VDDB	Operating Voltage Supply, +24V DC regulated	
2	VDDB	Operating Voltage Supply, +24V DC regulated	
3	VDDB	Operating Voltage Supply, +24V DC regulated	
4	VDDB	Operating Voltage Supply, +24V DC regulated	
5	VDDB	Operating Voltage Supply, +24V DC regulated	
6	BLGND	Ground and Current Return	
7	BLGND	Ground and Current Return	
8	BLGND	Ground and Current Return	
9	BLGND	Ground and Current Return	
10	BLGND	Ground and Current Return	
11	NC	No connection	4
12	NC	No connection	4

Note1. DET status

DET	BLU status
0 ~ 0.8V	Normal
Open collector	Abnormal

Recommend pull high R > 10K ohm, pull high voltage VDD = 3.3V

Note2. input control signal threshold voltage definition

Item	Symbol	Min.	Typ.	Max.	Unit
Input High Threshold Voltage	VIH	2	-	5.5	V
Input Low Threshold Voltage	VIL	0	-	0.8	V

Note3. VBLON

Mode selection

VBLON	Note
H or OPEN	BL On
L	BL Off

Note4. Please leave this pin unoccupied. It cannot be connected by any signal (Low/GND/High).

Note5. PDIM

PWM Dimming range:

PWM Dimming range:

(Note*) IF External PWM function includes 5% dimming ratio. Judge condition as below:

- (1) Backlight module must be lighted ON normally.
- (2) All protection function must work normally.
- (3) Uniformity and flicker could NOT be guaranteed

6.3. Power Sequence of backlight (LED)

Dip condition

Parameter	Value			Units
	Min	Typ	Max	
T1	20	-	-	ms ⁻¹
T2	500	-	-	ms
T3	250	-	-	ms
T4	0	-	-	ms
T5	1	-	-	ms
T6	-	-	-	ms
T8	-	-	10	Ms

7. Mechanical Characteristics

The contents provide general mechanical characteristics for the model P460HVN05.0. In addition the figures in the next page are detailed mechanical drawing of the LCD.

Outline Dimension	Horizontal (typ.)	1044.1mm
	Vertical (typ.)	598.7mm
	Depth (min.)	36.4mm
Bezel Opening Area	Horizontal (typ.)	1024.5mm
	Vertical (typ.)	579.1mm
Active Display Area	Horizontal	1018.08 mm
	Vertical	572.67 mm
Weight	11,000(g)	

Front View

Back View

8. Reliability Test Items

	Test Item	Q'ty	Condition
1	High temperature storage test	3	60°C, 500hrs
2	Low temperature storage test	3	-20°C, 500hrs
3	High temperature operation test	3	50°C, 500hrs
4	Low temperature operation test	3	-10°C, 500hrs
7	Vibration test (With carton)	1 (PKG)	Random wave (1.04G RMS, 2-200Hz) 20 mins per each X,Y,Z axes PSD(G^2/Hz) at different frequency show as below 2Hz, 0.0010 4Hz, 0.0300 8Hz, 0.0300 40Hz, 0.0030 55Hz, 0.0100 75Hz, 0.0100 200Hz, 0.0008
8	Drop test (With carton)	1 (PKG)	Drop Height: 25.4cm, Surround four flats and bottom flat twice (ASTMD4169)

9. International Standard

9.1. Safety

- (1) UL 60950-1, UL 60065; Standard for Safety of Information Technology Equipment Including electrical Business Equipment.
- (2) IEC 60950-1 : 2001, IEC 60065:2001 ; Standard for Safety of International Electro technical Commission
- (3) EN 60950 : 2001+A11, EN 60065:2002+A1:2006; European Committee for Electro technical Standardization (CENELEC), EUROPEAN STANDARD for Safety of Information Technology Equipment Including Electrical Business Equipment

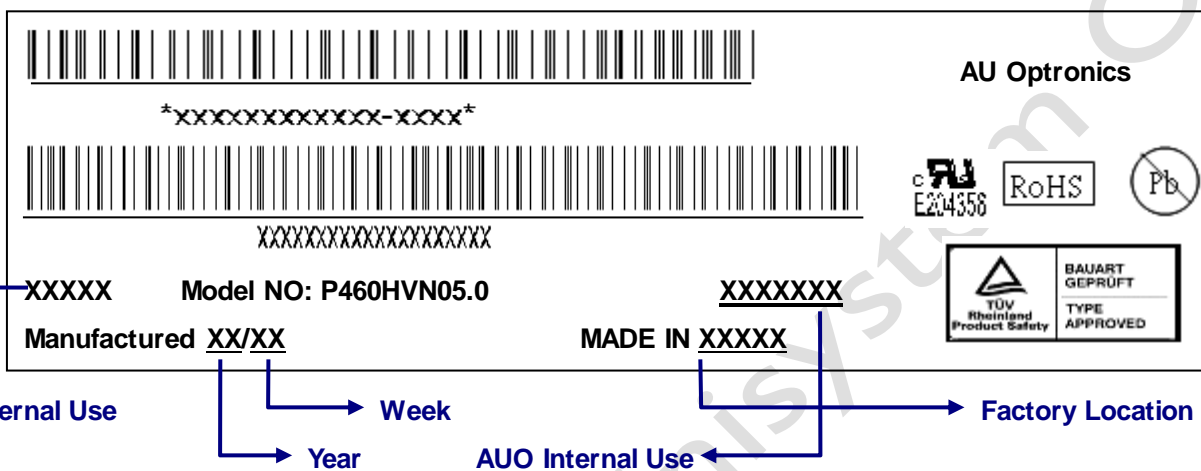

9.2. EMC

- (1) ANSI C63.4 "Methods of Measurement of Radio-Noise Emissions from Low-Voltage Electrical and Electrical Equipment in the Range of 9kHz to 40GHz. "American National standards Institute(ANSI), 1992
- (2) C.I.S.P.R "Limits and Methods of Measurement of Radio Interface Characteristics of Information Technology Equipment." International Special committee on Radio Interference.
- (3) EN 55022 "Limits and Methods of Measurement of Radio Interface Characteristics of Information Technology Equipment." European Committee for Electro technical Standardization. (CENELEC), 1998

10. Packing

10.1. DEFINITION OF LABEL:

A. Panel Label:

Green mark description

- (1) For Pb Free Product, AUO will add for identification.
- (2) For RoHS compatible products, AUO will add for identification.

Note: The green Mark will be present only when the green documents have been ready by AUO internal green team. (definition of green design follows the AUO green design checklist.)

B. Carton Label: (TBD)

10.2. Packing Method

10.3. Pallet and Shipment Information (TBD)

	Item	Specification			Packing Remark
		Qty.	Dimension	Weight (kg)	
1	Packing Box	4pcs/box	1160(L)mm*375(W)mm*690(H)mm	49.9	
2	Pallet	1	1180(L)mm*1150(W)mm*132(H)mm	14.7	
3	Boxes per Pallet	3 boxes/Pallet (By Air) ; 3 Boxes/Pallet (By Sea)			
4	Panels per Pallet	12pcs/pallet(By Air) ; 12 pcs/Pallet (By Sea)			
5	Pallet after packing	12(by Air)	1180(L)mm*1150(W)mm*822(H)mm (by Air)	164.49	40ft HQ
		24(by sea)	1180(L)mm*1150(W)mm*2466(H)mm (by Sea)	328.98	

11. PRECAUTIONS

Please pay attention to the followings when you use this TFT LCD module.

11.1. MOUNTING PRECAUTIONS

- (1) You must mount a module using holes arranged in four corners or four sides.
- (2) You should consider the mounting structure so that uneven force (ex. twisted stress) is not applied to module. And the case on which a module is mounted should have sufficient strength so that external force is not transmitted directly to the module.
- (3) Please attach the surface transparent protective plate to the surface in order to protect the polarizer. Transparent protective plate should have sufficient strength in order to resist external force.
- (4) You should adopt radiation structure to satisfy the temperature specification.
- (5) Acetic acid type and chlorine type materials for the cover case are not desirable because the former generates corrosive gas of attacking the polarizer at high temperature and the latter cause circuit broken by electro-chemical reaction.
- (6) Do not touch, push or rub the exposed polarizer with glass, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment. Do not touch the surface of polarizer for bare hand or greasy cloth. (Some cosmetics are detrimental to the polarizer.)
- (7) When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like chamois soaks with petroleum benzene. Normal-hexane is recommended for cleaning the adhesives used to attach front/ rear polarizer. Do not use acetone, toluene and alcohol because they cause chemical damage to the polarizer.
- (8) Wipe off saliva or water drops as soon as possible. Their long time contact with polarizer causes deformations and color fading.
- (9) Do not open the case because inside circuits do not have sufficient strength.

11.2. OPERATING PRECAUTIONS

- (1) The device listed in the product specification sheets was designed and manufactured for PID application
- (2) The spike noise causes the miss-operation of circuits. It should be lower than following voltage:
 $V = \pm 200\text{mV}$ (Over and under shoot voltage)
- (3) Response time depends on the temperature. (In lower temperature, it becomes longer..)
- (4) Brightness of LED depends on the temperature. (In lower temperature, it becomes lower.) And in lower temperature, response time (required time that brightness is stable after turned on) becomes longer.
- (5) Be careful for condensation at sudden temperature change. Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.
- (6) When fixed patterns are displayed for a long time, remnant image is likely to occur.

- (7) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimize the interface.

11.3. Operating Condition for Public Information Display

The device listed in the product specification is designed and manufactured for PID (Public Information Display) application. To optimize module's lifetime and function, below operating usages are required.

(1) Normal operating condition

1. Operating temperature: 0~40°C
2. Operating humidity: 10~90%
3. Display pattern: dynamic pattern (Real display).

Note) Long-term static display would cause image sticking.

(3) Operation usage to protect against image sticking due to long-term static display.

- (1) Suitable operating time: 24 hours a day or less.
(* The moving picture can be allowed for 24 hours a day)
- (2) Liquid Crystal refresh time is required. Cycling display between 5 minutes' information (static) display and 10 seconds' moving image.
- (3) Periodically change background and character (image) color.
- (4) Avoid combination of background and character with large different luminance.

(3) Periodically adopt one of the following actions after long time display.

- A. Running the screen saver (motion picture or black pattern)
- B. Power off the system for a while

(4) LCD system is required to place in well-ventilated environment. Adapting active cooling system is highly recommended.

(5) Product reliability and functions are only guaranteed when the product is used under right operation usages. If product will be used in extreme conditions, such as high temperature/ humidity, display stationary patterns, or long operation time etc..., it is strongly recommended to contact AUO for filed application engineering advice. Otherwise, its reliability and function may not be guaranteed. Extreme conditions are commonly found at airports, transit stations, banks, stock market and controlling systems.

11.4. Electrostatic Discharge Control

Since a module is composed of electronic circuits, it is not strong to electrostatic discharge. Make certain that treatment persons are connected to ground through wristband etc. And don't touch interface pin directly.

11.5. Precautions for Strong Light Exposure

Strong light exposure causes degradation of polarizer and color filter.

11.6. Storage

When storing modules as spares for a long time, the following precautions are necessary.

- (1) Store them in a dark place. Do not expose the module to sunlight or fluorescent light. Keep the temperature between 5°C and 35°C at normal humidity.
- (2) The polarizer surface should not come in contact with any other object. It is recommended that they be stored in the container in which they were shipped.
- (3) Storage condition is guaranteed under packing conditions.
- (4) The phase transition of Liquid Crystal in the condition of the low or high storage temperature will be recovered when the LCD module returns to the normal condition.

11.7. Handling Precautions for Protection Film

- (1) The protection film is attached to the bezel with a small masking tape. When the protection film is peeled off, static electricity is generated between the film and polarizer. This should be peeled off slowly and carefully by people who are electrically grounded and with well ion-blown equipment or in such a condition, etc.
- (2) When the module with protection film attached is stored for a long time, sometimes there remains a very small amount of glue still on the bezel after the protection film is peeled off.
- (3) You can remove the glue easily. When the glue remains on the bezel or its vestige is recognized, please wipe them off with absorbent cotton waste or other soft material like chamois soaked with normal-hexane.

11.8. Dust Resistance

- (1) AUO module dust test is conducted with marked holes (see Figure 1) sealed to comply with JIS D0207.
- (2) Module users should design set with these holes used/sealed (if not used) or covered by set mechanism to prevent dust from entering. The AUO testing procedure cannot replicate all different real world scenarios, module users should apply set dust resistance solution to meet users' requirement.

Figure 1
